TITAN
BLACK HOLE TECHNOLOGY

INTEGRATED SOLUTIONS

THE BLACK HOLE THAT HACKERS HATE – BUT FIREWALLS LOVE

THE POWER OF
TITAN™

Oasis Technology's TITAN system is a hardware/software Cyber Security Black Hole that sucks in hack attempts but does not let any out. This new and advanced network security technology safeguards corporations, financial groups, government, and military agencies from the growing specter of international cyber intrusions and terrorism.

PROTECTION NOW
Thousands, if not millions, of hackers are attacking your network at this very moment. TITAN protects against all of these threats. At the same time, TITAN filters the network traffic to allow the good traffic to go through but keeps the bad traffic out.

FAST IMPLEMENTATION WITH LITTLE OR NO MANAGEMENT TIME
Users report as much as a 92% reduction in traffic hitting their network and estimate a 50% reduction in help desk tickets. This results in a 60% reduction in time required to manage security policies due to TITAN's automated cyber defense system.

TITAN IS COMPATABLE WITH ALL FIREWALLS AND REQUIRES NO EXISTING NETWORK CHANGES

TITAN is a security enhancement device designed to work with all of the leading firewall providers, including Juniper™, Barracuda™, Sonic Wall™, Fortinet™, Palo Alto™, and CISCO's™ next generation firewalls.

TITAN is a proprietary, before the firewall, stand-alone, and self-contained cyber security device. It provides a non-intrusive connection to an organization's IT network, where data traffic first enters. It is designed for optimum performance, regardless of location, network type, or operating system. TITAN is easily installed and maintained – and requires NO customization or changes to your network. TITAN is also equipped with advanced Anti-Ransomware software for added protection.

TITAN's key attributes include: sucks up all hack attempts, sits in front of your firewall, housed at your company, in your control, reduces Internet bandwidth requirements, and increases network performance.

Over the last 3 years, **TITAN** has prevented over 29 BILLION intrusions, data breaches and data leaks nationwide in   multiple corporate installations.

TITAN IS A BLACK HOLE – NOT A FIREWALL

TITAN accepts all traffic coming in from the Internet. With its patented black hole technology, it ensures that only good traffic is passed on to the firewall. This prevents hackers from penetrating your firewall using well- known firewall penetration techniques.

TITAN's covert black hole technology secretly guards your network and watches each byte that tries to enter. This technology works in conjunction with your existing Cyber Security Technology in order to augment what you already have in place.

TITAN's architecture allows it to be a security partner with your existing firewalls and cloud servers to monitor and control all Internet traffic – all good and bad inbound traffic.

TITAN helps you stay PCI, HIPAA, SOX, and Gramm-Leach-Bliley compliant, and also provides undetectable and un-hackable monitoring and protection.

TITAN's patented black hole architecture is built from the ground up and designed to just stop hackers.

TITAN Works With ANY Firewall to Catch All Bad Incoming and OUTGOING Network Traffic - no more leaking firewalls

"Before TITAN....hackers took down one of our routers. Luckily, Oasis had all the right failsafe measures in place so there was little effect, but now with the installation of TITAN we know that all hacking attempts are caught up in the black hole - hackers don't even know what happened - and our network speeds are up, requiring less bandwidth."

Wolf Regener, CEO BNK Petroleum
